Portfolio: <https://o0al0o.github.io/>

AI art: https://o0al0o.github.io/Ai_artwork.html

I am highly passionate about creating new things. I have learnt from different projects in University. In year two, I participated in a project called "Homecoming." It is about home environment simulation. I am responsible for designing the Makey Makey with specific input for switching between different home environments, and I am also in charge of 3D modeling, installation, and material management. In my final year, I created an HD-2D Horror game using Unity. I am responsible for art design, 2d pixel art, and programming. I also have experience on developing a website using Visual Studio Code, design tools like Figma, Clip Studio Paint, AI tools like ComfyUI by building custom workflow to generate artwork, also different AI chatbots to guide me through difficulties
